Professional Summary

Full-Stack Software Developer with 10+ years of IT experience, including 5+ years of hands-on expertise in designing, developing, and scaling modern web and mobile applications using Laravel, React.js, Node.js, and Flutter. Experienced in building secure, high-performance RESTful APIs, architecting scalable backend systems, and designing optimized database schemas for enterprise-grade applications. Strong proficiency in deploying and managing cloud-native solutions on AWS, with a solid understanding of infrastructure, security, and performance optimization. Skilled in end-to-end software development lifecycle management, from system architecture and development to deployment and maintenance. Adept at delivering reliable, production-ready solutions while collaborating with cross-functional teams to align technical implementations with business objectives.

Education

Bachelor of Engineering (Computer Science and Engineering)

Panimalar Engineering College, Anna University - Chennai, Tamil Nadu, India - (2011 – 2015)

Technical Skills

Languages	: PHP, JavaScript, C#, VB.NET
Frontend	: React.js, Next.js, HTML5, CSS3, Bootstrap
Backend	: Laravel, Node.js, Express.js, CodeIgniter, RESTful API Development
Mobile Development	: Flutter, React Native
Databases	: MySQL, Microsoft SQL Server, MongoDB, SQLite, Database Optimization & Data Modelling
Cloud & DevOps	: AWS (EC2, RDS, S3, IAM), Vercel, CI/CD Pipelines, Cloud Deployment
Architecture & System Design	: Scalable Backend Architecture, Full-Stack Application Design, Performance Optimization, Secure System Development
Authentication & Security	: JWT Authentication, Role-Based Access Control (RBAC), API Security
Tools & Platform	: Git, GitHub, Bitbucket, Postman, VS Code, Android Studio, NPM, Composer, Figma, Codemagic
Operating Systems	: Windows, Linux
Development Practices	: Agile & Scrum Methodologies, Version Control, System Maintenance & Troubleshooting

Professional Experience

Software Developer

Pedro, Singapore

Sep 2020 – Present

- Designed, developed, and delivered enterprise-grade workforce and security management solutions using Laravel (PHP), React.js, and Flutter for web and cross-platform mobile applications.
- Architected scalable RESTful APIs with secure authentication, authorization, and role-based access control (RBAC) for integrated web and mobile platforms.

- Built and deployed cloud-native applications on AWS with scalable infrastructure, secure configurations, and production-ready deployment workflows.
- Developed offline-first mobile application modules with background synchronization to support uninterrupted operations in low-network environments.
- Optimized backend services, database queries, and application workflows to improve system performance, API response times, and reliability.
- Managed complete software development lifecycle (SDLC) including requirement analysis, system architecture, development, testing, deployment, maintenance, and production support.
- Integrated third-party services including payment gateways, email services, QR authentication systems, push notifications, and cloud storage platforms.
- Implemented secure coding standards, data encryption, access control, logging, and monitoring mechanisms to ensure application security and compliance.
- Collaborated with cross-functional teams and stakeholders to deliver scalable, business-critical applications aligned with operational requirements.

IT Support Engineer

Digital Alarm Technologies, Singapore

Mar 2018 – Jul 2020

- Supported enterprise IT infrastructure including Windows and Linux servers, ensuring system stability, security, and operational continuity.
- Assisted in server migration projects from Windows Server 2008 to Windows Server 2016 with minimal downtime and successful data transition.
- Managed system patching, software upgrades, antivirus updates, and preventive maintenance activities across multiple environments.
- Provided Tier 2 technical support for application, server, hardware, and network-related issues, ensuring timely issue resolution.
- Monitored server health, storage utilization, backup processes, and network connectivity to maintain high system availability.
- Configured and maintained user accounts, permissions, shared resources, and group policies within Active Directory environments.
- Collaborated with vendors and internal teams for troubleshooting infrastructure and security-related incidents.
- Documented technical procedures, troubleshooting steps, and infrastructure configurations for operational support and knowledge sharing.

Support Engineer

Hinduja Global Solutions, India

Jun 2016 – Jan 2018

- Troubleshoot hardware, software, printer, and network-related issues for end users across multiple departments.
- Managed operating system installations, workstation setup, software configuration, and user onboarding activities.
- Provided remote and on-site technical support while ensuring timely ticket resolution and user satisfaction.
- Assisted in network troubleshooting, LAN connectivity issues, and system performance monitoring.
- Maintained IT asset records, system documentation, and routine maintenance schedules.
- Coordinated with internal teams to support business-critical applications and daily IT operations.

Support Engineer

KBG Services, India

Jun 2015 – May 2016

- Maintained Windows server infrastructure, desktop systems, and network-related services for daily business operations.
- Performed hardware diagnostics, software installations, system upgrades, and preventive maintenance activities.
- Assisted users with troubleshooting technical issues related to systems, printers, and network connectivity.
- Monitored system performance and ensured proper backup and recovery procedures were followed.
- Supported basic network administration tasks including IP configuration, shared resources, and connectivity troubleshooting.

Projects

iSecure360 – Workforce & Security Management Platform

Client Location: Singapore

Technologies: Laravel, MySQL, Flutter, AWS

Summary: Enterprise workforce and security operations platform designed for security agencies and facility management operations

- Architected and developed an enterprise-grade workforce and security management platform with web and cross-platform mobile applications.
- Implemented GPS-based guard tour tracking with offline-first mobile capabilities and background synchronization.
- Developed modules for attendance management, incident reporting, leave management, patrol checkpoints, and operational checklists.
- Designed secure RESTful APIs with encrypted communication, JWT authentication, and role-based access control (RBAC).
- Optimized backend performance, database queries, and application workflows for high availability and scalability.
- Deployed and maintained AWS cloud infrastructure including EC2, RDS, S3, and automated backup configurations.

iSecure360 – Visitor Management System

Client Location: Singapore

Technologies: Laravel, MySQL, Flutter, AWS

Summary: Digital visitor and contractor management platform built for secure access control and streamlined visitor operations.

- Designed and developed a secure visitor and contractor management system to streamline digital check-in and check-out operations.
- Implemented QR-based authentication workflows for visitor access and identity verification.
- Built real-time visitor monitoring dashboards with live status tracking and reporting capabilities.
- Developed scalable RESTful APIs for seamless web and mobile integration.
- Enhanced system performance and database efficiency to support high-concurrency environments.
- Integrated notification services, email workflows, and cloud storage solutions for operational automation.

AVMS – Access Control & Visitor Management System

Client Location: Singapore

Technologies: React.js, MySQL, Flutter, AWS

Summary: Smart residential access control and visitor management solution integrated with automated entry and monitoring systems.

- Architected and delivered a scalable access control and visitor management platform with React.js web applications and Flutter mobile applications.
- Integrated ANPR (Automatic Number Plate Recognition) and smart door access systems for automated residential community entry management.
- Developed modules for visitor pre-registration, facility booking, resident feedback, and access approval workflows.
- Built secure RESTful APIs with encrypted data transmission, authentication, and role-based authorization controls.
- Managed AWS cloud infrastructure including EC2, RDS, S3, and IAM with optimized deployment and security configurations.
- Improved application performance through database indexing, query optimization, and backend caching strategies.

Certifications

- ITIL Foundation – PeopleCert
- Google IT Support Professional Certificate – Coursera
- Full Stack Web Development – Udemy
- Mobile App Development (Flutter) – Udemy
- Python Programming - Skillup
